1. Identify the stakeholders in corporate governance and the responsibilities of governing bodies and related business units/management.

1. *Consistency of the distribution of the dependent variable of the policy variable* (degree of internationalization) in the eight countries studied. Studies conducted previously made it more difficult to determine that even the dependent variable of the internationalization of companies was equally measured. In our analysis, this is evident immediately since we are dealing with the degree of internationalization, as measured by the number of foreign subsidiaries or foreign sales, or, if not, by foreign sales divided by total sales. For this reason, our findings are based on the first criterion discussed in this text. In the future, other studies have made a significant contribution to the study of the internationalization of companies.

1. The first step in the process is to identify the problem or issue that needs to be addressed. This involves gathering information and understanding the context of the problem.

[illegible]

These results suggest that the influence of stress on the relationship between the two variables is not linear. The relationship between the two variables is positive at low levels of stress, but becomes negative at high levels of stress. This is consistent with the idea that stress can have both positive and negative effects on the relationship between the two variables, depending on the level of stress. The results also suggest that the relationship between the two variables is more stable at low levels of stress than at high levels of stress. This is consistent with the idea that stress can have a more significant impact on the relationship between the two variables at high levels of stress than at low levels of stress.
